

Drinking Fountains

OASIS drinking fountains provide reliable, accessible hydration with durable construction, simple maintenance, and efficient performance for high-traffic facilities.

Features:

- ✓ ADA complaint drinking fountains available.
- ✓ Mechanical activation requires no power, providing water access even during outages.
- ✓ Contractor-friendly design simplifies installation and service.
- ✓ Stream-Saver bubbler reduces water usage by up to 50%.

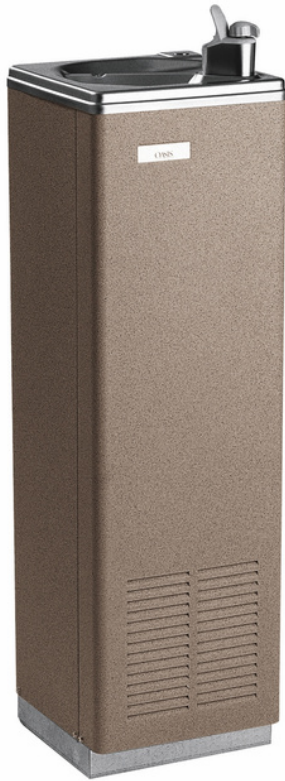

From schools and healthcare facilities to commercial and public spaces, OASIS fountains deliver dependable performance where hydration matters most. With flexible configurations and easy maintenance features, they are designed to keep water flowing with minimal downtime.

Built for long-term reliability, OASIS drinking fountains combine efficient cooling technology with durable materials designed to withstand demanding environments.

Reliable Performance. Built for Simplicity.

OASIS drinking fountains are engineered to make installation, operation, and maintenance straightforward for facility teams and contractors. Durable materials and proven components help ensure long-lasting performance in demanding environments.

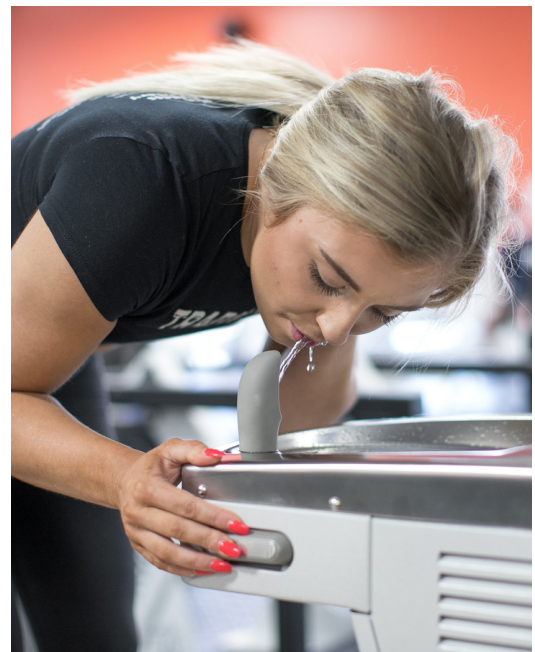

- **High-efficiency copper-on-copper cooling tank** delivers dependable chilled water.
- **External cold control and bubbler adjustment** allow quick maintenance and energy savings.
- **Galvanized steel construction with powder-coat finish** helps prevent rust and wear.

Flexible Options for Any Facility

- On-wall drinking fountains are available in single- or universal-split-level designs – one SKU supports high-left or high-right installation, simplifying ordering and installation for contractors.
- Compatible with NSF-certified VersaFilter III and advanced filtration upgrades, including Total PFAS and Pharmaceutical Filters.

OASIS makes it easy to maintain reliable hydration solutions for any facility, wherever you need it.
